“Flapping Sea Gull”
MINI SOLAR KIT

Carson, CA December 10, - - - Squawk, Squawk, Squaaaawk! OWI's ***Flapping Sea Gull*** mini solar kit will provide an adventure marked by growth in self-confidence and self-esteem. As the builder embarks on creating a kit that looks similar to a sea gull, one will sense a minute by minute attitude change. What first started out to be a box full of parts with a set of instructions has turned out to be a life like creation of a three dimensional wing flapping masterpiece. The ***Flapping Sea Gull*** loves the smell of the ocean breeze, but will require the warmth of the sun in order to flap it wings. It's just another of OWI's way to teach alternative energy principles. The suction cup will allow you to secure your new friend in direct sunlight and watch it be your weather indicator. Sea Gull poop clean up not required. No batteries and tools required and only 12 plastic parts to assemble.

If a Make-it and take-it type product is what you are looking for, this hands-on wing flapping character will make you the local hero. Their research team has found a distinct liking in educational programs such as After School, summer and Vacation programs. A great self-contained take-home project for boys or girls clubs! It's very inexpensive for individuals or groups and can motivate students to learn about micro-robotics and solar energy. Teaches students to follow precise visual diagrams and challenges young people to be technically precise with miniature parts.

Suggested selling price: \$ 13.95 USD
